

EXECUTIVE ANALYTICS REPORT

Ride-Hailing Performance & Revenue Report

A consolidated analysis of ride performance, revenue, geographic demand and time-based trends, compiled for executive decision-making with data-driven recommendations.

PREPARED BY

Mohamed Fouad

Data Analyst

REPORTING PERIOD

Full Year (Jan – Dec)

Leading Quarter: Q4 · Leading Month: Mar

SCOPE

150,000 Bookings

176 Locations Covered

Executive Summary

This report consolidates findings from five operational dashboards — Ride Performance, Revenue, Locations, Date Trends and Time Frame — covering 150,000 total bookings and \$51.85M in total booking value. The headline finding is a significant shortfall against both completion and cancellation targets, offset by a strengthening revenue trend entering Q4.

RIDE COMPLETION RATE 68.89% Target ≥ 90% · Missed by 21.1 pts	CANCELLATION RATE 38.00% Target ≤ 10% · 3.8x over target	TOTAL BOOKING VALUE \$51.85M 176 locations · Auto leading type	Q4 REVENUE GROWTH (QoQ) +2.18% Recovery after two declining quarters
--	---	---	---

Key Takeaways

- ⚠ **OPERATIONAL RISK — COMPLETION & CANCELLATION TARGETS BOTH MISSED**

Only 93,000 of 150,000 bookings (68.89%) were completed, well short of the 90% target, while cancellations reached 57,000 rides (38.00%) against a 10% ceiling. Driver-initiated cancellations (27,000) are the single largest contributor.
- ✓ **REVENUE MOMENTUM IS REBUILDING INTO Q4**

After QoQ revenue declines in Q2 (-1.26%) and Q3 (-0.77%), Q4 turned positive (+2.18%), driven largely by a strong March rebound (+11.81% MoM) following a weak February (-7.37%).
- ⚠ **DEMAND IS HIGHLY FRAGMENTED ACROSS LOCATIONS**

The top 10 locations account for only 6.16% of location share against a 25% target, and the bottom 50% of locations still hold 48.61% share (target ≤35%) — indicating no meaningful demand concentration across the 176 covered locations.

Ride Performance

Of 150,000 total bookings, completion and cancellation both sit well outside target thresholds, with cancellations driven primarily by drivers rather than customers.

Cancellation Breakdown

Top Driver Cancellation Reasons (27,000 total)

REASON	COUNT	SHARE
Customer related issue	6,837	25.3%
Customer was coughing / sick	6,751	25.0%
Personal & car related issues	6,726	24.9%
More passengers than permitted	6,686	24.8%

Top Customer Cancellation Reasons (10,500 total)

REASON	COUNT	SHARE
Wrong address	2,362	22.5%
Driver asked to cancel	2,295	21.9%
Driver not moving toward pickup	2,335	22.2%
Change of plans	2,353	22.4%
AC not working	1,155	11.0%

DRIVER RATING

Average driver rating across the period sits at approximately 4.23 / 5 — a reasonably healthy service-quality signal that is not itself explaining the high cancellation rate.

Financial Performance

Total booking value reached \$51.85M, led by the Auto category and UPI payments. Quarterly revenue currently sits at 72% of the annual target.

TOTAL BOOKING VALUE

\$51.85M

THIS MONTH REVENUE

\$4.32M

-\$23,777 vs last month (-0.55%)

THIS QUARTER REVENUE

\$13.08M

72% to \$46.52M target

LEADING TYPE / PAYMENT

Auto · UPI

Revenue by Booking Type

Revenue by Payment Method

METHOD	REVENUE	SHARE
UPI	\$23.35M	45.0%
Cash	\$12.90M	24.9%
Uber Wallet	\$6.20M	12.0%
Credit Card	\$5.22M	10.1%
Debit Card	\$4.18M	8.1%

CONCENTRATION RISK

UPI alone drives 45% of revenue and Auto alone drives ~25% of revenue — a healthy scale advantage, but one that concentrates exposure if either payment rails or the Auto segment face disruption.

Location Insights

176 locations are covered in total. Demand and revenue are highly dispersed, with no single location or cluster dominating — both concentration targets were missed.

COVERED LOCATIONS

176

TOP LOCATION

Khandsa

TOP 10 LOCATIONS SHARE

6.16%

Target ≥ 25%

BOTTOM 50% SHARE

48.61%

Target ≤ 35%

Top Revenue Locations

LOCATION	REVENUE
Barakhamba Road	\$341,154
Khandsa	\$338,502
Subhash Chowk	\$329,386
Pataudi Chowk	\$328,572
Badarpur	\$327,193
Tughlakabad	\$326,283

Arrival Time Gap (Selected Locations, minutes)

LOCATION	DRIVER ARRIVAL	CUSTOMER ARRIVAL
IGI Airport	8.26	20.28
Laxmi Nagar	8.26	20.21
Pulbangash	8.18	20.08
Manesar	8.18	19.90
Badarpur	8.16	19.56

⚠ CUSTOMERS TAKE ~2.4X LONGER TO REACH PICKUP THAN DRIVERS

Across sampled locations, drivers consistently arrive in ~8.2 minutes while customers take ~20 minutes to reach the pickup point — a gap large enough to plausibly contribute to driver-side cancellations and idle driver time.

Time-Based Trends

Revenue trends show a volatile first half stabilizing into Q4, while ride and revenue patterns diverge across the week — weekends generate disproportionately higher revenue despite comparable or lower ride volume.

Quarterly Revenue Growth (QoQ)

Quarter	Booking Value	QoQ Revenue	QoQ Rides
Q1	\$13.07M	—	—
Q2	\$12.90M	-1.26%	-0.24%
Q3	\$12.80M	-0.77%	+0.97%
Q4	\$13.08M	+2.18%	-1.29%

Notable Monthly Swings (MoM Revenue)

Month	MoM Change
February	-7.37%
March	+11.81%
April	-6.88%
October	+5.39%

Rides vs. Revenue by Day of Week

Day	Total Revenue
Sunday	\$9.63M
Saturday	\$9.57M
Friday	\$6.67M
Wednesday	\$6.58M
Thursday	\$6.56M
Tuesday	\$6.42M
Monday	\$6.41M

Weekend Revenue Premium

Ride counts peak mid-week (Monday) and dip on Thursday, yet revenue peaks on Sunday and Saturday — implying weekend trips are on average higher-value (likely longer distance or premium vehicle types) even though weekend ride volume is not the highest.

Peak Demand Windows

Leading hour: 6:00 PM | Leading minute: 17 | Leading month: March | Leading quarter: Q4

Recommendations

The following recommendations are prioritized by their potential impact on the two largest gaps identified: the completion/cancellation shortfall and location demand fragmentation.

- 1

Target driver-initiated cancellations directly

HIGH PRIORITY

Driver cancellations (27,000) are the single largest loss category, split almost evenly across four causes. Introduce upfront trip/passenger-count confirmation to reduce "more passengers than permitted" cancellations, and provide drivers a simple in-app health/safety decline flow to reduce ad hoc cancellations for sick or difficult customers.
- 2

Close the customer pickup-time gap

HIGH PRIORITY

Customers take roughly 2.4x longer than drivers to reach the pickup point (~20 min vs ~8 min). Test pickup-pin accuracy improvements, earlier "driver arriving" nudges, and short grace-period adjustments to reduce driver idle time and downstream cancellations.
- 3

Investigate "No Driver Found" hot spots

HIGH PRIORITY

10,500 rides failed purely on supply. Cross-reference this against the hourly and weekday demand tables to identify specific time/location windows for targeted driver incentives or surge-based supply positioning.
- 4

Build density in high-volume corridors

MEDIUM PRIORITY

With the top 10 locations holding only 6.16% share against a 25% target, consider concentrated driver incentives around proven high-volume points (Khandsa, Barakhamba Road, Saket, Badarpur, Pragati Maidan) to build reliable hub density rather than spreading supply thinly across all 176 locations.
- 5

Capitalize on the weekend revenue premium

MEDIUM PRIORITY

Weekend trips generate disproportionately higher revenue despite comparable ride volume. Explore weekend-specific premium vehicle promotions or dynamic pricing refinements around Saturday and Sunday to capture additional upside.
- 6

Monitor UPI concentration risk

LOWER PRIORITY

UPI represents 45% of revenue. Maintain payment-rail redundancy and monitor UPI uptime closely, given the scale of dependency on a single payment method.
- 7

Sustain the Q4 recovery

LOWER PRIORITY

Q4 marked the first positive QoQ revenue growth (+2.18%) after two declining quarters. Review what drove the March rebound (+11.81% MoM) to replicate the conditions into the next fiscal year.
